

AI Fill — Section & Field Autofill: Detailed Block Diagram

SECTION AUTOFILL — handleAiFillSection(sectionId)

FIELD AUTOFILL — handleAiFillField(fieldId)

KEY DIFFERENCES: Section vs Field Autofill

MUTEX CHECK

Section: only checks aiSectionLoading
(allows concurrent field + section)

Field: checks aiFieldLoading
|| aiSectionLoading || aiLoading
(blocks during any AI operation)

PROMPT SCOPE

Section: buildFillPrompt
filters CHARACTER_SCHEMA to
only the section's fields

Field: buildFillPrompt
generates prompt for
a single field only

PROGRESS TRACKING

Section: total = section.fields.length
current updates per parsed field

Field: total = 1
current stays at 1

POST-PROCESSING

Section: setOpenSections adds
the section to visible set

Field: no openSections change
(field is already visible in
its open section)
