

Sidebar AI — Scratchpad & Quick Commands

SCRATCHPAD — Free text → Auto-field mapping

1. User types free-form thoughts about character
- ↓
2. Text auto-saved to localStorage (per character)
- ↓
3. User clicks «Раскидать по анкете»
- ↓
4. handleAiScratchpad(text) called
- ↓
5. POST /api/ai/fill with { scratchpadText, stream: false }
- ↓
6. Server: buildScratchpadPrompt(existingData, text, context)
- ↓
7. AI maps free text to relevant schema fields → JSON response
- ↓
8. setPendingDiff(proposed) → DiffModal opens for review

Note: Scratchpad uses NON-streaming mode (stream: false)

QUICK COMMANDS — 3 one-click scenarios

lifeEvent

- Random past event that shaped the character's personality
- Fields: keyEvent, childhoodMemory

hiddenMotive

- Secret need that contradicts the stated goal
- Fields: statedVsHiddenGoal, hiddenNeedFromOthers

innerConflict

- Struggle between beliefs and actions
- Fields: coreContradiction, conflictType, hypocrisy

Flow for each command:

1. Click command button
2. handleQuickCommand('lifeEvent' | 'hiddenMotive' | 'innerConflict')
3. POST /api/ai/fill with { quickCommand, stream: false }
4. Server: buildQuickCommandPrompt(existingData, commandType, context)
5. AI returns JSON with relevant fields
6. setPendingDiff(proposed) → DiffModal
7. User reviews → Accept (merge + save) or Reject

Note: QuickCommands also use NON-streaming mode (stream: false)
