

Character Editor — System Prompts Connectivity Map

LEGEND

- Prompt DB → Builder
- Builder → API Route
- API → Page/Component
- Editor saves prompt to DB
- User-facing prompt variant
- API accepts multiple prompt modes

Note: /api/ai/fill is the SWISS ARMY KNIFE endpoint — it handles 5 different prompt modes (full fill, section, field, scratchpad, quickCommand) based on which parameters are sent. Voice has a fallback: if VOICE_PROMPT is not in DB, reads prompt/prompt_dialog.md from disk.
